3. Use the formula $BAC = \frac{600n}{w(0.6n + 169)}$, where n is the number of drinks consumed and w is the weight of the person. Using this formula and a calculator, compute the BAC for a 193-pound person for integers from n = 1 to n = 10. According to this model, how many drinks can a 193-pound person consume in an hour without exceeding the legal measure of drunk driving ($BAC \geq 0.08\%$)?

Compute the BAC for a 193-pound person for integers from n = 1 to n = 10.

Number of Drinks	1	2	3	4	5	6	7
BAC							

(Round to three decimal places as needed.)

How many drinks can a 193-pound person consume in an hour without exceeding the legal measure of drunk driving, that is with a BAC of less than 0.08%?
